Abstract (en)

[origin: EP0466249A1] Method and apparatus for applying a wide bituminous sheet (2) to a substrate (1), such as the soil, a roof or the like, which sheet (2) directly prior to its contact with the substrate (1) is guided over and in direct contact with a preheated surface (4), in particular a counterrotating drum (4), so that the temperature of the sheet is under precise control and a wall (10) of bitumen is automatically formed and under control in front of the nip between the substrate and the sheet (2) supported by the roller (8). <IMAGE>
