Abstract (en)
[origin: EP0466312A1] An inflation nozzle (14) for inflating an article such as a cargo air bag (10) comprises a main body (24) through which compressed air flows to an outlet (36) in a nozzle tip (42) and a handle (26) pivoted to the main body (24) carrying at its end adjacent the nozzle tip (42) a spring-loaded closure (52) for closing off the outlet (36) when the inflation nozzle is out of engagement with a cargo air bag valve (12). The body (24) and handle (26) are spring loaded (30) whereby the handle (26) can be squeezed and slid into engagement with the air bag valve (12); and, on release, the nozzle tip (42) protrudes into the air valve (12) opening it and completing locking of the nozzle (14) to the valve (12). <IMAGE>
