Abstract (en)  
[origin: EP0466584A1] This projector is intended to be equipped with a lamp of tubular shape provided with a contact stud at each end. At least one of the sockets (11) provided for receiving this lamp is carried by a support (15) mounted slidably in the longitudinal direction against the base (9) of the frame (7) of the projector and/or against the bottom (8) of the housing (1) of the latter, this being obtained by means of a fastening member, for example a screw (17), which is carried by this support and which is thus capable of serving as a means of displacement of the latter. This fastening member, which is accessible from outside for the purpose of slackening it and driving it, is mounted slidably in a longitudinal slideway between separate positions corresponding to different lengths of lamps. This projector can thus be equipped with tubular lamps of different types which have different lengths. <IMAGE>
