Abstract (en)
[origin: EP0466675A1] Tool, especially wrench, having a head part, which engages on the workpiece or the screw, and a thinner shank set back with respect to the head part, which serves for gripping and on whose broad sides in each case one support is attached for identification of the tool or wrench, which are interconnected for the purpose of fastening to the wrench. For easy recognition of tools or wrenches, the supports for identification are formed from a coloured plastic part (K) which consists of a collar (5) surrounding the shank, the clear cross- section (6, 12) of which collar corresponds to the cross-section of the shank (3, 10) at the location surrounded by the plastic part (K), the colour of the plastic part (K) preferably being different for each tool or wrench size, but the same for identical tool or wrench sizes. <IMAGE>
