Abstract (en)

[origin: EP0466685A1] The invention relates to a method for manufacturing a facade lining with a multiplicity of individual lining elements having indentations, in particular joints, between one another and provided with an outer coating. According to the invention provision is made for the lining elements (7) and the joint filler (71), introduced into the indentations and materially bonded to the same, to be bonded substantially over their entire surface, by their outwardly facing surface, to a base coat (70), to which reinforcing coat (70) an external top coat (75) is bound, optionally with interposition of an adhesive and/or priming coat (74), and also to the corresponding facade lining itself. <IMAGE>
