Abstract (en)

[origin: WO9111231A1] A ski binding part can slide along the ski in a guide rail (14) attached to the ski and can be releasably locked in predetermined positions. The ski binding part is fixed at the chosen position on the guide rail (14) by a spring (11) loaded catch part (10) with an actuating element (6) which can be adjusted at two different vertical heights. This ski binding part can be used with a heelpiece (5) connected by a metal strip (3) to the ski binding part. To this end, the actuating element (6) has an additional (third) surface (22) by means of which the catch part (10) can be locked in two defined vertical positions. The heelpiece (5) with the metal strip (3) can therefore be adjusted relative to the toe pieces (4), or both ski binding parts (8, 9) can be adjusted in the longitudinal direction of the ski.
