Abstract (en)  
[origin: EP0467106A1] Light-sensitive silver halide photographic materials are disclosed comprising a support and silver halide emulsion layer or layers, wherein at least one of said silver halide emulsion layers contains tabular silver halide grains having an average diameter-thickness ratio of at least 3:1 and at least one mercury compound in an effective speed increasing amount. The light-sensitive materials can be advantageously used in high temperature processing and have increased photographic speed without serious fog problems.
