Abstract (en)
[origin: EP0467120A2] The fastener (1) is telescopically extensible. <??>It comprises a first tubular component (2) over the upper and lateral faces of which fit a plurality of links (5) like those used for the rest of the bracelet. Into the first component a second tubular component (8) can be introduced, which can, in turn, receive a third component (10) in the form of a plate attached to which is a locking system to secure the fastener in the retracted position. <??>The fastener is applicable to a bracelet and is no thicker than the links from which said bracelet is built up. <IMAGE>
