Abstract (en)

[origin: EP0467816A1] The present invention relates to a device for eliminating fibres and textile fly. The device is mainly composed, on the one hand, of an essentially hollow body consisting of a housing and of a gripping handle, on the other hand of a spindle partially arranged in said housing with the possibility of rotation and fixed to an inertia flywheel, and finally of an apparatus for driving the spindle/inertia-flywheel assembly in rotation, the device being characterised in that the spindle (4) is secured in terms of translational movement to the housing (2) by means of a removable fastening apparatus (7) accessible from outside, without the removal of said hollow body (1) or said housing (2), thus allowing a rapid change of said spindle (4). <IMAGE>
