Abstract (en)

[origin: WO9012137A1] Method for sewing knitting threads into a web submitted to a warp knitting machine, in which a sharp-nosed row of knitting needles (65, 66) penetrates the web for sewing the knitting threads into the web along a row of stitches with each knitting cycle. With each knitting cycle two rows of knitting needles simultaneously penetrate and withdraw from the web such that a zig-zag-shaped penetration pattern with two penetration rows extending parallel to the needle array is produced with each knitting cycle.
