Abstract (en)  
[origin: WO9013724A1] A reinforcing bridge prevents plaster at the lateral edges of window sills from crumbling due to the action of vibrations, wind and thermal expansion. The reinforcing bridge has a piece of elastic plastic profiled section which surrounds one of the lateral cover strips (30.2) of the window sill (30). After the reinforcing bridge (1) is mounted on the cover strip (30.2) of the window sill (30), reinforcing pins (40, 42) seated in the profiled section project into the space to be filled with the plaster (26, 28) of the embrasure and the facade. First, the window sill (30) together with its cover strips (30.2) is mounted, then a reinforcing bridge (1) is fastened to the cover strips (30.2) on each side and finally the plaster (26, 28) is applied to the embrasure and the facade.
