Abstract (en)

The supporting element for orientatable louver boards, for shutters with simplified assembly which comprise a hollow body (2) which has, on its two longer sides, variously shaped seats (3) (4) for coupling to other orientatable louver boards of the shutter, comprises guiding means (6) and retention means (7) for associating a louver board with the supporting element itself along a direction which is substantially orthogonal to the axis of the louver board; the retention means are furthermore suitable for releasing the louver board from its respective supporting elements along two mutually orthogonal directions, one of which is substantially parallel to the axis of the louver board. <IMAGE>
