Abstract (en)

A front and/or rear support adjustment device, particularly for ski boots composed of at least one quarter (3) associated with a shell (2). The device has the peculiarity of being constituted by at least one slider (7) which can move axially with respect to the at least one quarter and has at least one inclined plane (8). The slider furthermore interacts with at least one supporting element (5) for the calf and/or tibia which is articulated above the at least one quarter. <IMAGE>
