Abstract (en)

[origin: EP0468176A1] The invention relates to a hinge (5) for articulated junction of two part wings (1, 2) of a door wing, one part wing of which is articulated on a body part of a piece of furniture or the like, consisting of two fastening parts which can be connected to each of the part wings and which have hinge arms (7, 7') connected to one another by means of a joint. To achieve the object of providing a hinge of this type which can be adjusted in a simple way, whilst being simple to assemble, the fastening parts consist of baseplates (6, 6'), on which the hinge arms (7, 7') are fastened so as to be adjustable in their longitudinal direction and/or in at least one direction transverse to this longitudinal direction. <IMAGE>
