Abstract (en)

A carrier suitable for developing an electrostatic image which comprises core particles coated with a layer comprising fluorocarbon particles and porous resin particles; wherein the porous resin particles are composed of a plurality of elementary resin particles fused together at the surfaces thereof, the elementary resin particles having: (a) a particle size of not more than 0.5  $\mu\text{m}$ ; (b) a BET specific surface area of from 5 to 150  $\text{m}^2/\text{g}$ ; and (c) a volume average particle size of from 1.5 to 5.0  $\mu\text{m}$ . h
