Abstract (en)

[origin: EP0468827A1] The invention relates to a mobile mixing station constituting one of the elements of a mobile, heavy, autonomous station for making concrete. The station according to the invention comprises a mobile mixing block (2) and a transport chassis (13), the transport chassis having the shape of a reversed U-shaped profile, the two wings of which are equipped with vertical means for guiding and for raising the mixing block (2) and the core of which has a through-recess, inside which the telescopic mixing block (2) is mounted in a mobile manner, said mixing block interacting with the guiding and raising means so as to occupy a low, transport position, in which it is locked inside the wings of the profile and a high, working position, in which it is locked suspended above the through-recess of the transport chassis (13). <IMAGE>
