Abstract (en)

[origin: EP0468838A1] The technical sector of the invention is that of ignition systems for pyrotechnic compositions. <??>The ignition system according to the invention comprises an ignition relay (4) arranged in a housing (3) and in contact with the pyrotechnic composition (2). It is characterised in that the housing (3) is closed by means of a lattice (5) in contact with a flame- sensitive composition (6), itself in contact with the ignition relay (4). <??>The invention is used for the delayed ignition of pyrotechnic compositions. <IMAGE>
