Abstract (en)

[origin: WO9012491A1] The device for the automatic positioning of plants is comprised of the combination, on the one hand, of a vertical positioner element (1) conical at the top and cylindrical at the bottom wherein is introduced by known means the plant (6, 7) with its earth ball (7) which takes place in the cylindrical portion (5) while the plant itself (6) is in the conical portion (4) which is tapered upwards and, on the other hand, an insufflation head (2) provided with a seal (3) adjusted to the positioner element (1) and allowing to inject air or a gas when the assembly is above a hole which has been previously made in the receiver element where the plantlet is to take place. The device facilitates and automates the setting in place of plants of all kinds while preserving their integrity owing to the use of non-mechanical handling means.
