Abstract (en)  
[origin: EP0469179A1] Modular lighting systems provide the possibility for the illumination of rooms having different demands on the illumination to be individually configured, to be precise taking account of economic factors in conjunction with optimal lighting engineering. Such a modular lighting system places stringent requirements on its technical and lighting engineering variance. Such a modular lighting system is proposed for interiors which consists of two support rails (2) of arbitrary length, which are arranged at a separation parallel and complementary with respect to one another, have a hollow profile, and are configured on the spot through the accommodation of module units (GLA, OLA, SR1, SR2, SR3, LL1, LL2, TRA, SSA, LSR, SS1, SS2, SS3) to form a continuous rail track member (1) with lighting fixtures and radiators integrated therein and, if necessary, other electrical or mechanical subassemblies or components. <IMAGE>
