Abstract (en)

[origin: EP0469289A2] A lifting and deburring apparatus for interlocking-tile revolving presses has a lifting plate (1) and a suction plate (2) and, surrounding these, a cutter frame (7), which are movable relative to one another. In order to be able to achieve perfect cleaning of the cutters (12) and gentle setting down of the green interlocking tiles (6), the suction plate (2) is connected rigidly to the lifting plate (1) and at the same time immovably in relation thereto and the cutter frame (7) is arranged extendably and retractably in relation to the suction plate (2). <IMAGE>
