Abstract (en)

[origin: EP0469570A1] Transport apparatus with a curved section intended for use with a stream of overlapping signatures, having a transport path (1) for the signatures which comprises a large number of endless belts (3) which are arranged parallel to one another, the course of the curved section being arranged to slope upwards from the inside to the outside. The endless belts (3) are deflected by driven rollers (4) and guided by guide discs (12). The possibility is provided of changing the inclination of the transport path formed by the endless belts. <IMAGE>
