Abstract (en)
[origin: EP0469959A1] - The invention relates to a blade-carrying tool, of the type forming a gripping handle (2) provided at its front end with a removable blade (3), which is held in position by a clamping mechanism (4). - According to the invention, the said clamping mechanism (4) is of the pincer type and comprises two jaws (5, 6) between which the said blade is capable of being engaged and which are connected, respectively, to levers (7, 8). The latter provide control of the said clamping mechanism and are capable of occupying an open position, in which the said jaws are separated from each other, and a closed position, which is spontaneously locked through the action of disengageable locking means, in which the said jaws are applied on either side, respectively, of the said blade, holding it firmly in position. <IMAGE>
