Abstract (en)
[origin: EP0470539A2] The invention relates to a ski boot, which comprises a foot shell (1) and an upper (3), which is divided into a collar (6) and a rear flap (7) and is coupled to the foot shell (1) by means of rivets (2). At the same time, the foot shell (1) is provided with a central longitudinal slit, and its closing tabs are connected to each other by means of a tensioning fastener (4, 5). In order to improve the sealing of the upper (3) with respect to the foot shell (1) on this ski boot, the invention provides that the collar (6) has an upwardly extending notch (10), which begins at the lower transverse edge and is covered by a cover part (12), and that the cover part (12) bears a tensioning fastener (13). <IMAGE>
