Abstract (en)

[origin: EP0470908A1] The invention relates to a presentation device for unit elements with relative positions which can be modified in a plane, provided with a chassis frame (1) of general rectangular shape. The device according to the invention is noteworthy in that it comprises a plurality of rectangular subframes (2), optionally in several parts (2a, 2b, 2c), which are identical with one another and fitted side-by-side in the chassis frame (1), so that they can move relative to one another, the dimensions of the said subframes (2) being such that they cover the entire free surface of the chassis frame except for a surface corresponding to the area of a subframe, in order to permit the displacement of the said subframes, whilst each subframe comprises means for receiving, as desired and in a visible manner, one of the unit elements to be presented. <IMAGE>
