Abstract (en)

[origin: EP0471148A2] The invention relates to a device for disconnecting and/or connecting bus lines on a computer and is characterised in that, within a slot strip and on the plug strip of a plug-in board, in particular on the motherboard, at least one flat cable, for example at least one flexible printed-circuit board, is inserted between any contacts of the plug strip and the bent, sprung terminal contacts of the slot strip, which flexible printed-circuit board has contacts at one end and leads to any unit of the computer at the other end. The invention furthermore relates to a circuit for implementing a multiuser system with a personal computer, using the previously described device.
