Abstract (en)
[origin: EP0471603A1] The invention relates to a connector locking device comprising a barrel (20), generally having the shape of a hollow cylinder, carried by a first portion (10) of the connector, a pin (31) carried by a second portion (12) of the connector and a locking means which can move between a first and a second position for which the said barrel (20) and the said pin (31) are solidly attached one to the other or are free, in which: - the locking means is positioned in openings (35) of the pin (31) and is movable between a first position in which it is partly outside the said openings (35) and a second position in which it is totally inside the said openings (35), - the pin (31) comprises, on the outside, an actuating rod (32) and, on the outside, a slide mechanism (33) which can both be displaced axially, - the barrel (20) comprises a housing in which the portion of the locking means extending outside the openings (35) is positioned. <IMAGE>
