Abstract (en)
[origin: WO9013641A1] This invention provides a stably transformed eucaryotic cell comprising a pol III promoter and a foreign transcribable DNA, the foreign transcribable DNA being under the control of the pol III promoter. This invention also provides retroviral vector which comprises a chimeric t-RNA introduced into the 3' long terminal repeat (LTR) of the retroviral vector.

Abstract (fr)
Une cellule eucaryote transformée de manière stable comprend un promoteur pol III et un ADN étranger susceptible d'être transcrit sous la direction du promoteur pol III. Un vecteur rétroviral comprend un ARN-t chimérique introduit dans la séquence répétitive terminale longue en 3' du vecteur rétroviral.
