Abstract (en)
[origin: EP0471976A2] The invention relates to a door lock in the form of a multiple-locking lock, in which the door lock can be unlocked without key actuation from the inside only, whereas both the lock latch and the lock bolt can be released from outside after key actuation only. The door lock is lockable from inside and outside by pulling up the door handle and can also be released again from inside by pushing down the door handle, without a key being necessary for this.
