Abstract (en)  
[origin: EP0471990A2] The invention specifies a double-coil loudspeaker which reproduces two audio signals of an in each case different frequency spectrum, the low-frequency range as in the conventional single loudspeaker and the voice range like an optimised double-coil loudspeaker. For this purpose, it is specified to arrange the compound windings (20, 21) above one another on the voice coil former (17). <IMAGE>
