Abstract (en)
[origin: JPH04254853A] PURPOSE: To obtain a photographic processing chemical generating no dust or relatively small dust by incorporating a specific compound. CONSTITUTION: This photographic chemical consists essentially of an active principal agent and an assistant and further contains at least one kind of a compound expressed respectively by formula I and II or for example, at least one kind of a water soluble polymer such as polystyrene sulfonic acid and polyvinyl alcohol or a mixture of at least two kinds expressed by formula I and II are incorporated in the ratio of 0.5-100g per 1kg solid matter. In formula I and II, R expresses a 2-4C alkyl, (n) expresses 1-200 and R1 expresses 10-18C alkyl.
