Abstract (en)
[origin: WO9014564A1] The invention relates to a damper intended to be used for regulating the flow or air or other gases. The damper generally comprises a plurality of laths (3) journaled in a frame (2). The object is to provide a novel damper the ends of the laths (3) of which are placed tightly against the frame forming a passage for the flow of gas. This is achieved by providing the ends of the laths (3) with a flexible seal member (6, 7) following closely the frame.
