Abstract (en)
[origin: EP0472780A1] In a door fastening for motor-vehicle doors, which consists of a door-holding rod (1), equipped with catchmarks (3) and articulated pivotably on one door arrangement part, door or door spar, and of a holder housing (4) having two mutually opposed braking bodies (5) bearing under a spring load against the door-holding rod (1) at least in the region of the catchmarks, and in which the holder housing (4) forms a hollow body essentially closed with the exception of the passage orifices (6, 8) for the door-holding rod (1), to prevent penetration of dirt, water and other deposits on the door-holding rod (1) there is arranged within the holder housing (4) at least one elastically deformable dirt wiper (13, 16) which, ahead of the braking bodies (5) in the direction of movement of the door-holding rod (1) assigned to the opening of the door, constantly bears at least against the surfaces of the door-holding rod (1) which interact with the braking bodies (5). <IMAGE>
