Abstract (en)

[origin: EP0472847A2] The guide-threshold string (1) consists of guide thresholds (2) which are joined releasably to one another and have trapezoidal basic bodies (3) and hollow guide rails (11) arranged at a distance above these. The basic bodies (3) are connected to the guide rails (11) by means of sigma-shaped posts (12). The posts (12) are located at a distance from one another and at a distance from the ends of the guide thresholds (2). Both the basic bodies (3) and the guide rails (11) have at one end centring pins (14, 15) and at the other end receptacles (16, 17) for the centring pins (14, 15). Two successive guide thresholds (2) are connected by means of insertion bolts (22) of sigma-shaped cross-section which engage at least partially positively through the centring pins (14, 15) and the receptacles (16, 17).
