Abstract (en)
[origin: EP0473060A1] Provided at the rear end of the drawer (11) are swivel arms (23) which can be swivelled inwards just before the drawer has been pushed in completely in order to reduce the cabinet depth required. The swivel arms (23) have running rollers (25) which run in guide rails (20) on the furniture side. To increase the lateral stability of the drawer guide, interacting locking elements (40, 41) are provided on the swivel arms (23) and on the drawer (11), which elements lock the swivel arm (23) in the extended state until a guide element (27) passes onto the guide path (26) controlling the inward swivel movement. Additionally, there is an auxiliary roller which is provided on a swivellable lever and can be lifted out of the guide rail (20) for removal of the drawer. <IMAGE>
