Abstract (en)

[origin: EP0473475A1] The invention relates to a header (10) for a main heat exchanger, which contains a second heat exchanger (24) having two connecting hoses (60) passing in a leakproof manner through a wall (14) in the header, and by means of which the second heat exchanger is fixed inside the header. Each of the hoses (60) is connected up to the second heat exchanger (24) by insertion through a passage orifice (46) in the wall (14) and attachment in a seating (40) in the second heat exchanger (24). The connecting hose comprises a deformable terminal portion (66) able to be radially expanded inside a hole (40) in the seating (38). <IMAGE>
