Abstract (en)
[origin: WO9114976A1] An electromechanical or electronic time switch clock comprises a device for programming and displaying/reading the switching times and an electric contact switch device (22) in a housing (1) with an assembly device (7) for locking onto distributor rails. The device for programming and displaying/reading the switching times is designed as a module (8) which is removably arranged and supported in the region of the top (4) of the distributor housing (1).
