Abstract (en)  
[origin: EP0473994A2] The invention relates to a package with an essentially dimensionally rigid but yet elastically deformable external container (2), within which an easily deformable internal container (3) is arranged. A closure (1) closes the space (16) located between the internal and external container and closes off the filling material from the external atmosphere and the filling material from the intermediate space (16) and has an extraction valve (5) and a ventilation valve (7) for the intermediate space (16). The internal container (3) is borne here by a sheath-like bracket (4) arranged between the external container (2) and closure (1), said bracket having recesses (26) through which the intermediate space (16) is connected to the ventilation valve (7). <IMAGE>
