Abstract (en)

[origin: EP0474204A1] Process and device for the compensation of the declination (N) of slant buildings, in particular slant towers (1), material being taken from the earth essentially just underneath the foundation base (6) on the side (A) of the building opposite the declination (N), in order to right the building again, at least partially. The foundation (2) is expediently reinforced on the outside and inside before removal of the material. <IMAGE>
