Abstract (en)

[origin: EP0474239A1] The invention relates to a plaster base and method for its manufacture. The plaster base (1) consists of a grid (2) and a multiplicity of spacers (3) connected to the grid (2). The spacers (3) are of star-shaped design having outwardly pointing projections (7) and are distributed evenly over the grid (2). Preferably, they possess three or four projections (7) which are aligned obliquely with respect to the laying direction (12) and form a trough (8) for receiving the plaster. In the preferred embodiment, the projections (7) of the spacers (3) form, with one another, a preferably regular network (16) having separated or thinned nodal points (18). In the preferred manufacturing method, the spacers (3) are manufactured in a manner joined together as a netlike mat (17), laid onto the grid (2) and adhesively bonded thereto. Subsequently, the nodal points (18) of the mat (17) can be detached and removed. <IMAGE>
