Abstract (en)
[origin: WO9115711A1] The headlight proposed comprises a reflector (10) in which a discharge lamp (11) is mounted. The light exit aperture of the headlight is covered over by a pane (12). In order to screen the headlight with respect to the interference emitted by the discharge lamp (11), which could perturb radio reception in motor vehicles, the pane (12) has a transparent, interference-absorbing metal coating.
