Abstract (en)

[origin: WO9114917A1] The technical sector of the invention is that of triggering delays for a military head (1) comprising at least two charges (3, 8) detonating in sequence and arranged in a casing (2). The delay system comprises a screen (6) capable of moving axially inside the casing (2), under the effect of the detonation of a first charge, between an initial and an end position in which it acts on means (12) for controlling the triggering of a second charge. A component of compressible material (13) is arranged inside the casing between the screen (6) and the control means (12). Application to shells, rockets or missiles.
