Abstract (en)
[origin: EP0474953A1] For separate waste disposal of the inside layer (9), consisting of an aluminium foil, of a packaging container produced by the winding method, the overlapping foil edges (16, 17) are glued together only at a distance from an outside edge (18) of the foil. The non-glued overlapping foil edge (21) allows the inside layer (9) to be peeled off from the cardboard body after the bottom membrane of the packaging container has been removed. The peeling-off movement begins when the bottom membrane is removed due to the fact that its edge is glued to the non-glued overlapping foil edge. A gripping tab is provided on the bottom membrane for removal of the latter. <IMAGE>
