Abstract (en)

[origin: EP0475094A1] The package consists of a liquid container and a hand pump arranged thereon, whose activation and delivery valve (330) can be operated counter to the effect of a compression spring and is provided with an outlet opening (332) for the liquid. A protective cap (334) is removably attached to the upper side of the liquid container. An activation lever (370) for the pump is attached swivellably in the protective cap (334). The activation lever extends from its swivel axle in the protective cap beyond the delivery valve (330) of the pump. The free end (364) of the lever is bent in the direction of the container lid (324). In the region of the free end (364) of the lever, the protective cap (334) is provided with a gap (366) into which the activation lever (370) at least projects. The top of the delivery valve (330) is connected non-rotatably, but axially movably to the activation lever; its outlet opening (332) is flush with a passage opening in the protective cap (334). The package can be handled conveniently and is space-saving. <IMAGE>
