Abstract (en)
[origin: EP0396967A2] 2.1. (Sheet) packages (51) of the present type are primarily used for accommodating folded paper pocket handkerchiefs. The packages (51) are provided with a re-closable opening aid. This consists of a tear-open tab (34) or a folding flap and an adhesive label (49) or adhesive strip (47). <??>2.2. For the purpose of an efficient manufacture and special design of such packages (51), these are fed in double rows (packaging rows 52, 53) and provided in pairs with adhesive labels (40) or adhesive strips (47). A particular advantage is afforded by the manufacture and feeding of double labels (55) or double strips (79), which are then severed during the transport of the packages (51) and folded into the end position. <??>2.3. By suitable design, namely dimensioning of the adhesive labels (40) with a connection piece (42) extending in the region of an end wall (27), the stability and handling of the packages is improved. <IMAGE>
