Abstract (en)  
[origin: WO9014985A1] A container ship has holds (1-5), which are defined by transverse bulkheads (8, 9, 10 and 11) in the longitudinal direction of the ship. Said transverse bulkheads comprise relatively broad, conventional bulkheads (8, 9) and relatively narrow bulkheads (10, 11) connected on both sides to the broad transverse bulkheads (8, 9) by means of tension absorbing members (12) extending in the longitudinal direction of the ship.
