Abstract (en)

[origin: EP0476180A1] A support frame (1), with which intermediate bogies (3) and/or end-position bogies (4) for a train unit of semitrailers (5) which can be used in road and rail transport can be transported in a simple and economical manner, has at each end a connection system (2) which is constructed in the same manner as the connection system (2) associated with the two-axle or multi-axle intermediate bogies (3) or end-position bogies (4). A running rail arrangement (9) is arranged in the longitudinal direction on the support frame (1) in the track width of the intermediate bogies (3) or end-position bogies (4). In the region of at least one end of the support frame (1) a height-adjustment device (10) is arranged by means of which the running rail arrangement (9) can be adjusted in height parallel to the transverse axis. <IMAGE>
