Abstract (en)

[origin: EP0476181A1] A housing wall connector for coaxial cables, having a tubular outer conductor part (3), which passes through a hole (2) in the metallic housing wall (1) and is guided in the hole (2) with play with respect to the housing wall (1). According to the invention, an outer conductor tube (4), which is plugged into the hole (2), is attached to the housing wall (1), the outer conductor tube (4) being split at one end into spring tongues (5), pretensioned inwards, and the tubular outer conductor part (3), which can be inserted into the outer conductor tube (4) with play with respect to rigid sections of the outer conductor tube (4a), being supported by projections (5a) which are directed inwards and are provided on the free ends of the spring tongues (5). <IMAGE>
