Abstract (en)  
[origin: EP0476211A1] In a manual control unit, e.g. a suspended keying device for a crane system, a wheel segment (4) is supported outside a housing (1) such that it can pivot. The wheel segment (4) is connected via a connecting rod (8) to a deflection wheel (3). The deflection wheel (3) is connected to the electrical switching elements (6; 7), which may consist of either on-off switches or continuously variable switching elements.
