Abstract (en)

[origin: EP0476406A1] In a cap spinning device, there is the problem that the winding of the spun yarn is carried out with a periodic changing yarn tension. To solve this, it is now proposed to assign the single motor (6) of the cap (3) and the single motor (5) of the spindle (1) each individually to a frequency converter (7, 8), so that any speed difference between the cap and the spindle can be set. <IMAGE>
