Abstract (en)

[origin: EP0477126A1] The glide strip (4) comprises a foot part (5) adapted for arrangement in a guide rail (2) and a slide part (6) of relatively hard material, where the foot part (5) is of a relatively soft material and the slide part (6) has the form of a flap. The roller shutter comprises transverse slats (1), the ends of which run in guide rails (2) at opposite sides of the roller shutter, where at least one glide strip (4) is mounted in each guide rail (2) so that the slats (1) slide along the slide parts (6) of the strip, and these abut on the slats (1) with a predetermined bias. <IMAGE>
